**OUR SPEAKERS AND THEIR TOPICS**

Mozghan Anjom was born in New York City but grew up in Tehran, Iran. He graduated from Shiraz University in 2001 with a bachelor’s degree in Industrial Metallurgy. He came to SBU in 2002 to enroll in the Ph.D program in the Materials Science & Engineering Dept. His advisor is Dr. Devinder Mahajan. Currently, the main commercial source of hydrogen for PEM-based fuel cells is synthesis gas, a mixture of H₂ and CO. Removal of the CO to acceptable levels is very costly but necessary to prolong Pd catalyst life. Mozghan’s talk will be about the research into an alternative method of producing CO-free ultra-pure H₂ using microorganisms.

Wes Francillon earned his Engineering Science degree at SUNY at Stony Brook in 2002 and is now in his third year as a graduate student in the Center for Thermal Spray Research. His advisor is Dr. Sanjay Sampath and he is also an active member of Long Island ASM student chapter. His subject, mixed oxide conductors, are of interest in many applications, including oxygen-permeable membranes and solid oxide fuel cells. Wesley’s talk will focus on the synthesis, phase transformations and microstructural development in the sol-gel derived Y₂\text{Ti}_{2}\text{Zr}_{x}\text{O}_{7+\frac{x}{2}} ceramic system.
